Convertissez le schéma conceptuel en schéma relationnel.

Créez le schéma conceptuel d'abord si nécessaire.

A **calendar program** that allows users to browse each other's calendars and to book common appointments shall be developed. The program has a database which keeps track of the **users** and their **calendars**. You use the calendar to store data concerning **appointments**. An appointment **starts and ends** at a given time on a given day and is described by a **text**. You may specify that you wish to be reminded of an appointment. **Reminders** are of different **kinds**: a signal in the computer's loudspeaker, a pop-up window with the description of the meeting, or an e-mail containing the description. You may, for each reminder, specify **how long before** the appointment that you wish to be reminded. Develop a UML model of the database.
